

## Instructions for Printing a Pattern From Your Computer. PDF patterns can be viewed in Adobe Reader. It's a Free Application

Some Pattern companies make their patterns in Layers

Press the layers tab

Notice that all the boxes are unchecked except size 10 and the All Files boxes. Now only the size I'm making will print.

If there is no layers tab, then you must print all the sizes and cut out the size you want to make. They will be color coded.

1. We need to check that print at actual size is checked

2. Change "print all pages" to only the pages that have the pattern pieces that you want to print. In this case I ended up printing pages 11-28.

3. I printed in grayscale and checked save ink.
